EDUCATION

Stony Brook University

Stony Brook, NY

Expected May 2030

- B.S. Computer Science, Sophomore Standing
- Honors College, Honors in Computer Science Program

Stuyvesant High School

New York, NY

- Excellence in Mathematics Award, AIME Qualifier (3x), CEMC Euclid/Fermat School Winner *June 2026*
- Relevant Coursework: Linear Algebra, AP Calculus BC, Cybersecurity, AP Physics C *GPA: 97.64/100*

TECHNICAL SKILLS

Languages: C, SQL, Python, MATLAB, C#, Java

Tools: Git, MongoDB, Supabase / PostgreSQL, KiCAD, LaTeX

Frameworks: Next.js, React.js, Express.js, Node.js, HTML/CSS

PROFESSIONAL EXPERIENCE

Stony Brook Campus Residences

Stony Brook, NY

IT and Programming Intern

September 2026 - Present

- Port legacy codebases into unified React/Express.js web interface for tracking asset availability and status
- Perform on-site and remote technical diagnostics, resolving hardware and network issues across campus

Hack Club

Shelburne, VT and Remote

Hardware Engineering Intern

May 2022 - March 2024

- Led design and fabrication of production PCBs for Blot (2D CNC drawing machine) and Sprig (handheld gaming console), overseeing process from prototype to fab; Sprig reached a 600+ unit production run
- Published open-source reference designs adopted by the maker community (NTAG NFC Tag, USB-C Hub)
- Mentored dozens of high schoolers with design review and expertise through first-time PCB design

Logistics and Operations Intern

July 2021 - August 2023

- Built a mailing address database using USPS Intelligent Mail Barcode, enabling no-cost trackable postage
- Integrated Shippo API into a Slack shipping agent to automate postage label purchase and generation
- Reduced domestic shipping costs by up to 60% and international costs by up to 80%

RESEARCH EXPERIENCE

Memorial Sloan Kettering Cancer Center

New York, NY

Student Intern, Medical Physics

May 2025 - November 2025

- Fine-tuned and validated a CNN-based deformable image registration (DIR) model for aligning cone-beam CT scans to planning CTs for lung cancer treatment monitoring, achieving validation DICE score over 0.75
- Prototyped a multi-head attention DIR architecture, reaching parity with CNN and VoxelMorph baselines
- Ran training and inference on HPC clusters and configured CUDA environments for training compatibility
- Wrote MATLAB and Python code to preprocess and validate training datasets

Summer Intern, Medical Physics

July 2024 - August 2024

- Wrote C#, Python preprocessing code for head/neck cancer segmentation training for treatment tracking
- Leveraged HPC clusters and IBM LSF (bsub) for job scheduling

PROJECTS

Personal Photography Portfolio | Next.js, Tailwind CSS, Cloudinary CDN | *GitHub* **2026**

- Designed a performant Next.js photography site with Cloudinary CDN delivery and EXIF-based filtering, cutting image load times and simplifying browsing across collections
- Built a secure authenticated admin dashboard (NextAuth, Bcrypt) backed by Supabase PostgreSQL, enabling non-technical content updates without redeploying the site

Component Inventory Manager | PostgreSQL (Supabase), NextAuth | *GitHub* **2026**

- Implemented a full-stack Next.js/Supabase system to manage electronic components, MPNs, and distributor data, with a barcode-scanner-compatible search tool for fast lookups
- Generated thermal-printable asset labels to tag and organize components, streamlining inventory retrieval
